Policy

ME Medicaid provides coverage for telemonitoring services (which may or may not take place in real time) under certain circumstances.

Covered telemonitoring services include:

- Evaluation of the member to determine if telemonitoring services are medically necessary;
- Evaluation of Member to ensure cognitively and physically capable of operating equipment;
- Evaluation of residence to determine suitability for telemonitoring services;
- Education and training;
- Remote monitoring and tracking of data by a RN, NP, PA or physician and response with appropriate clinical interventions;
- Monthly telephonic services;
- Maintenance of equipment; and
- Removal/disconnection of equipment when telemonitoring services are no longer necessary or authorized

**Home and Community Benefits for the Elderly and for Adults with Disabilities**

Final approval must be obtained from the Department, Office of Aging and Disability Services upon a recommendation by the ASA or SCA. In making such a recommendation the ASA or the SCA must consider and document the following information:

- Number of hospitalizations in the past year;
- Use of emergency room in the past year;
- History of falls in the last six months resulting from injury;
- Member lives alone or is home alone for significant periods of time;
- Service access challenges and reasons for those challenges;
- History of behavior indicating that a member’s cognitive abilities put them at a significant risk of wandering; and
- Other relevant information.

“Telehealth,” as it pertains to the delivery of health care services, means the use of interactive real-time visual and audio or other electronic media for the purpose of consultation and education concerning and diagnosis, treatment, care management and self-management of an enrollee’s physical and mental health and includes real-time interaction between the enrollee and the telehealth provider, synchronous encounters, asynchronous encounters, store and forward transfers and telemonitoring. “Telehealth” does not include the use of audio-only telephone, facsimile machine, e-mail or texting.

**Source:** *Maine Revised Statutes Annotated, Title 24-A, Sec. 4316 & LD 1263 (2019 Session).* (Accessed Mar. 2020).

A carrier offering a health plan in this State may not deny coverage on the basis that the health care service is provided through telehealth if the health care service would be covered if it was provided through in-person consultation between an enrollee and a provider.

A carrier may not exclude a health care service from coverage solely because such health care service is provided only through a telehealth encounter, as long as telehealth is appropriate for the provision of such health care service.

A carrier shall provide coverage for any medically necessary health care service delivered through telehealth as long as the following requirements are met:

- The health care service is otherwise covered under an enrollee’s health plan.
- The health care service delivered by telehealth is of comparable quality to the health care service delivered through in-person consultation.
- Prior authorization is required for telehealth services only if prior authorization is required for the corresponding covered health care service. An in-person consultation prior to the delivery of services through telehealth is not required.
- Coverage for telehealth services is not limited in any way on the basis of geography, location or distance for travel.
- The carrier shall require that a clinical evaluation is conducted either in person or through telehealth before a provider may write a prescription that is covered.
- The carrier shall provide coverage for the treatment of 2 or more persons who are enrolled in the carrier’s health plan at the same time through telehealth, including counseling for substance use disorders involving opioids.

A carrier shall provide coverage for telemonitoring if:

- The telemonitoring is intended to collect an enrollee’s health-related data, including, but not limited to, pulse and blood pressure readings, that assist a provider in monitoring and assessing the enrollee’s medical condition;
- The telemonitoring is medically necessary for the enrollee;
- The enrollee is cognitively and physically capable of operating the mobile health devices the enrollee has a caregiver willing and able to assist with the mobile health devices; and
- The enrollee’s residence is suitable for telemonitoring. If the residence appears unable to support telemonitoring, the telemonitoring may not be provided unless necessary adaptations are made.

A carrier shall provide coverage for telephonic services when scheduled telehealth services are technologically unavailable at the time of the scheduled telehealth service for an existing enrollee and the telephonic services are medically appropriate for the corresponding covered health care services.

In order to be eligible for reimbursement under this section, a provider providing health care services through telehealth must be acting within the scope of the provider’s license. A carrier may not impose additional credentialing requirements or prior approval requirements for a provider as a condition of reimbursement for health care services provided under this section unless those credentialing requirements or prior approval requirements are the same as those imposed for a provider that does not provide health care services through telehealth.

A carrier may not require a provider to use specific telecommunications technology and equipment as a condition of coverage under this section as long as the provider uses telecommunications technology and equipment that comply with current industry interoperability standards and that comply with standards required under HIPAA.
